A manual on the fundamentals of radio communication is being compiled by the Communications Section. This manual explains in layman's terms the basic principles of radio communication, and the requirements necessary to establish a radio net. It is planned to use this manual as a text for classes requiring a brief, but concise background knowledge of radio communication.

On 22 April the Communications Section provided communication for, and participated in a training problem conducted by the Air Training Branch.

On 20 April 1953 a two (2) hour lecture on Communications in [REDACTED] Operations was presented for the [REDACTED] Operations Course.
